

### Epoxy Coating System Self-Leveling 100% Solid. VOC compliant

#### **Description**

CS 100 is a 100% solid, two component epoxy coating. Monochrome color with opaque and glossy finish, seamless, and a high covering power, it can be used to restore deteriorated floors or protect new floors. CS 100 provides excellent resistance to abrasion and chemical resistance. CS 100 meets all kinds of requirements such as durability, performance as well as aesthetics. Seamless plinths are optional with CS COVE. This seamless coating from ICR COATING SYSTEMS offers an unlimited choice of color, and a smooth or non-slip finish can be achieved using very fine to very aggressive aggregates. This system has been approved by the Canadian Food Inspection Agency (CFIA). It meets LEED standards. CS 100 also meets FDA, USDA requirements and CE certification.

#### **Primary applications**

- ✓ Aircraft hangers
- ✓ Assembly areas
- ✓ Classrooms

ICR SOLUTIONS

- ✓ Clean rooms
- ✓ Laboratories
- Areas of light manufacturing
- ✓ Mechanical rooms
- / Walkways

#### <u>Advantages</u>

- ✓ Contains no solvent with a very low VOC content, allowing for interior applications without harmful odors
- ✓ Impermeable and seamless
- ✓ Seamless coves can be shaped using CS 100 -COVE
- ✓ Dense surface resistant to bacteria and moisture and easy to clean
- ✓ Excellent adhesive properties, allowing for application on a wide variety of substrates
- ✓ May apply several layers on itself with excellent adhesion

ICR SOLUTIONS

Epoxy Coating System Self-Leveling 100% Solid. VOC compliant

TECHNICAL DATA

#### **SURFACE PREPARATION**

The surface to be coated must be well primed. Remove dust, laitance, grease, oils, dirt, impregnating agents, waxes, foreign matter, any previous coatings, and disintegrated substances by mechanical means such as shot-blasting (BLASTRAC) or any other approved method to obtain an ICRI-CSP 3-4 profile. The compressive strength of the concrete must be at least 25 MPa (3625 lbs/in<sup>2</sup>) after 28 days and the tensile strength at least 1.5 MPa (218 lbs/in<sup>2</sup>).

#### **MIXING**

The products must be conditioned at a temperature between 18 ° C (65 ° F) and 30 ° C (86 ° F). Pre-mixed color or clear (A)

Mix the resin part (A) perfectly before pouring the hardener (part B) according to the indicated mixing ratio. Depending on product amount and size of mixing equipment, mix for 1 to 3 minutes at low speed (300 to 450 rpm). During mixing, scrape the walls and bottom of the container at least once with a trowel to obtain a homogeneous mixture. As the pot life is limited, prepare amount of desired product as required in order to avoid any loss.

#### Part (A) when adding color pod

Incorporate a full colored container into the clear part (A), and then thoroughly mix until the color is uniform (one colored container pod per part A gallon) before pouring in the hardener (part B) according to the indicated mixing ratio. Depending on product amount and size of mixing equipment, mix for 1 to 3 minutes at low speed (300 to 450 rpm). During mixing, scrape the walls and bottom of the container at least once with a trowel to obtain a homogeneous mixture. As the pot life is limited, prepare amount of desired product as required in order to avoid any loss.

### Epoxy Coating System Self-Leveling 100% Solid. VOC compliant

#### **APPLICATION**

APPLICATION : 1st coat of CS 100

Apply the coating using a rubber squeegee and pass a roller to obtain a uniform coating.

APPLICATION : 2nd coat of CS 100

**ICR SOLUTIONS** 

Apply the finish coat using a rubber squeegee and pass a roller to obtain a uniform coating.

#### **CLEANING**

Clean all application equipment with the recommended cleaner (Solvent 01). Once the product has hardened, it can only be removed by mechanical means. In case of skin contact, wash thoroughly with warm soapy water.

#### **RESTRICTIONS**

- ✓ Do not apply at temperatures below 10 ° C / 50 ° F or above 30 ° C / 86 ° F
- The relative humidity of the surrounding work environment during the application of the coating and throughout the curing process should not exceed 85%
- ✓ Substrate temperature must be 3 °C (5.5 °F) above dew point measured
- ✓ Humidity content of substrate must be <4% when coating is applied
- ✓ Do not apply on porous surfaces where a transfer of humidity may occur during the application
- The application of this coating on an interior or exterior substrate without a moisture barrier is at risk of detachment (by hydrostatic pressure).
- ✓ Protect the coating from all sources of moisture for a period of 48 hours
- ✓ Surface may discolor in areas exposed to regular ultraviolet light

#### **HEALTH AND SAFETY**

In case of skin contact, wash with water and soap. In case of eye contact, immediately rinse with water for at least 15 minutes. Consult with a doctor. For respiratory problems, transport victim to fresh air. Remove contaminated clothes and clean before reuse. Components A and B contain toxic ingredients. Prolonged contact of this product with the skin is susceptible to provoke an irritation. Avoid eye contact. Contact with may cause serious burns. Avoid breathing vapors release from this product. This product is a strong sensitizer. Wear safety glasses and chemical resistant gloves. A breathing apparatus filtering organic vapors approved by the NIOSH/MSHA is recommended. Predict suitable ventilation. Consult the material safety data sheet for further information.
